

Listing of Claims:

1-17 (Cancelled)

18. (Currently amended) A window comprising:

a frame having a top member, a bottom member and two side members defining a frame plane,

a sash having a top member, a bottom member and two side members defining a sash plane,

a screening arrangement,

said sash being connected to the frame by means of at least one hinge connection to provide a hinge axis substantially parallel with the frame top member and the sash top member, such that the sash may be moved from a closed position to a ventilating position, in which ventilating position the sash plane forms an angle within a limited angle range with the frame plane to provide at least one ventilating aperture, said screening arrangement covering said at least one ventilating aperture at least partly in the ventilating position,

said screening arrangement comprising at least one screening element, which, in a closed position of the window, is arranged in an inactive position at the interface between frame and sash, and in the ventilating position spans the ventilating aperture between the frame bottom member and the sash bottom member, and/or between the frame top member and the sash top member, and that the at least one screening element is connected with the sash or frame top or bottom member and is in self-releasable ~~releasable~~ engagement with the corresponding frame or

Serial No.: 10/563,422

Amendment

sash member within said limited angle range, wherein said at least one screening element is provided exclusively at the top and/or bottom member of the sash and the frame.

19. (Previously presented) A window as claimed in claim 18, wherein the at least one screening element of the screening arrangement is adapted to be moved automatically from an inactive position corresponding the closed position of the window to an active position corresponding to the ventilating position, and from the active position to the inactive position when the window is brought from its ventilating position to its closed position.

20. (Previously presented) A window as claimed in claim 18, wherein the at least one screening element of the screening arrangement is adapted to be moved automatically from an active position corresponding to the ventilating position to an inactive position when the window is brought past its ventilating position to a more tilted position of the sash.

21. (Previously presented) A window as claimed in claim 18, wherein the screening arrangement includes at least one screening element formed as a flap connected with the top or bottom member of the frame or the sash by means of a hinge.

22. (Previously presented) A window according to claim 21, wherein said flap is adapted to hang freely under influence of gravity.

23. (Currently amended) A window as claimed in claim 21, wherein said flap is preloaded

Serial No.: 10/563,422
Amendment

towards the active position of the screening element by means of a tensioning element ~~such as a coil spring~~.

24. (Previously presented) A window as claimed in claim 18, wherein the screening arrangement includes at least one screening element formed as a curtain connected with the top or bottom member of the frame or the sash.

25. (Previously presented) A window as claimed in claim 24, wherein said curtain is a roll-up curtain preloaded in the direction of the inactive position of the screening element.

26. (Previously presented) A window as claimed in claim 24, wherein said curtain is a folded curtain.

27. (Previously presented) A window as claimed in claim 18, wherein the screening arrangement includes at least one screening element formed as a slider connected with the top or bottom member of the frame or the sash.

28. (Previously presented) A window as claimed in claim 27, wherein the slider includes a grid of wires or a plurality of fins or a brush.

29. (Previously presented) A window as claimed in claim 18, wherein each of the top and bottom members of the frame and/or sash is provided with a chamfer.

30. (Cancelled)

31. (Previously presented) A window as claimed in claim 18, wherein sealing means are provided at each of the side members of the frame and sash.

32. (Previously presented) A window as claimed in claim 31, wherein said sealing means comprise a sliding sealing or a brush element.

33. (Previously presented) A window according to claim 31, wherein the sealing means are arranged to seal any gap between overlapping side members of frame and sash in the area between the hinge axis and the screening arrangement.

34. (Previously presented) A window according to claim 32, wherein the sealing means are arranged to seal any gap between overlapping side members of frame and sash in the area between the hinge axis and the screening arrangement.

35. (Previously presented) A window according to claim 18, wherein the screening arrangement further comprises interface screening means arranged at the interface between the screening element and the sash side members.

36. (New) A window as claimed in claim 23, wherein said tensioning element is a coil spring.
